

ZYGO Qualifire™

New Technology for OptoTech Workshop Interferometers

New Laser Interferometer Module

Starting from 1st May 2025, OptoTech is introducing the new ZYGO Qualifire™ laser interferometer module to our measuring system portfolio in the range of 4" to 6".

The Qualifire™ delivers significant improvements over its predecessor, Verifire™ (discontinued on 30th April 2025), featuring an optimised design for enhanced portability, improved dust protection and easier maintenance - ensuring greater reliability and confidence in metrology.

What does this mean for you?

Due to the discontinuation, we can no longer fully guarantee service for the Verifire™ model. In particular, there will be difficulties in spare parts availability, which will make maintenance and repairs increasingly challenging in the long run.

This affects existing OptoTech 4" and 6" Interferometers like OWI 150 HP, OWI 750, OWI 1250, OWI 1250, OWI 100 ECO (before 2024) etc.

What are your options?

→ Retrofit-Option

We offer retrofit packages for certain machine types to upgrade them to the new interferometer module. Contact us to see if this option is available for your measuring system.

→ New Measuring System

For older equipment, replacing the machine with a new one may offer greater cost-effectiveness through improved efficiency and lower maintenance costs.
